

ILLUME TEMPLATE

Illume is a clean, modern, html5 single page web template. This template is designed for educational or business purpose websites.

it's built on bootstrap and sass style.

It is easy to use and customize for your next business website.

1. How to edit sass/scss css file?

First you need to add **Ruby Installer** Install on your window then you need to install sass using command line or git

Gem install sass

When sass install then you need to target folder using git or command line and watch target file with sass watch code or if you are using grunt then you can for compile .

Just normally command line sass compile like below:

D: \localfile\htdocs\illume>sass --watch scss/style.scss:css/style.css

If you want to change or customize something there are different file on **partials** folder in sass file where **_variable.scss** file in which variable are define for theme we have added some color variation on our demo as all css file are included in main file you can use theme css red.css , blue.css instead of style.css for different theme color variation according to your requirement.

You can make unlimited color variation of theme according to your choice only change by **\$theme-color: #000;** in **_variable.scss** file . You can see other requirement file in this folder according to your requirement you can customize.

1. How to edit and customize header logo and navigation ?

There is use bootstrap grid system col-2 for logo and col-10 for navigation. And use custom style for logo..

Navigation code is same as bootstraps so you can see on <http://getbootstrap.com/>

2. How to customize banner?

We have added owl carousel for banner there is target '.banner' class to JavaScript function to banner item slide.

```
<div class="banner">

    <div class="item">

        <h2 class="sr-only"> first Image </h2>

        

    </div>

<!-- add other item .. -- >

</div>
```

For JavaScript control .. see in script js file.

```
function itemslide() {
// js control stuff here
}
```

3. How to customize other banner carousel in JavaScript?

There are added responsive owl carousel according to different breakpoint for other carousel like course offer, team, our client and other carousel .

You can see Example JavaScript code in script.js into js folder.

```
$('.offer-slide-wrap').owlCarousel({
// all stuff here ..

});
```

You can visit for more detail url <http://owlgraphic.com/owlcarousel/>

4. How to customize video banner?

We have added video banner in video banner index page you can visit other page on pages dropdown There is added video banner credit by jquery.vide js

You can customize in this way see given below code

```
<div id="block" style="width: 100%; height: 500px;" data-vide-bg="video/banner-bg" data-vide-options="position: 0% 50%">
```

5. How to customize Gallery pop up?

We have added masonry and imagedloaded js file for masonry style on galley page and added jquery magnific popup for popup image then it has **#link id** used to wrap for masonry and popup javascript function Items

You can see in Script file.

```
function masonrygallery() {
```

```
// Stuff there in script file
```

```
}
```

```
function popupgallery() {
```

```
// Stuff there in script file
```

```
}
```

6. How to customize contact us map?

We have added Google map api and custom map js You can see in JS file. You can use your image map etc. on this section..

Html code in this way :

```
<div id="map" class="map map-box"> </div>
```

7. How to add animation?

You need to add only “**viewpoint**” class in your individual section for initial animation.

For animation credit by **animate.css** and **viewpointchecker.js** with bits of script which is in script file.
